

BizPredictAI - Execution Steps

Complete Installation & Running Guide

■ PREREQUISITES

Before starting, ensure: **Python 3.9+** | **Node.js 18+** | **VS Code** | **Git** installed

Check versions: `python --version` and `node --version`

STEP 1: BACKEND SETUP (FastAPI + Python)

#	Action	Command
1	Navigate to backend	<code>cd C:\Users\VICTUS\Desktop\BizPredictAI\backend</code>
2	Create virtual environment	<code>python -m venv venv</code>
3	Activate venv (Windows)	<code>venv\Scripts\activate</code>
	Activate venv (Mac/Linux)	<code>source venv/bin/activate</code>
4	Install dependencies	<code>pip install fastapi uvicorn pydantic sqlalchemy</code>
5	Run backend server	<code>python -m uvicorn main:app --reload</code>
✓	Success indicator	See: INFO: Uvicorn running on http://127.0.0.1:8000

■ **IMPORTANT:** Keep this terminal window open! Backend must stay running.

STEP 2: FRONTEND SETUP (Next.js + React) - OPEN NEW TERMINAL

#	Action	Command
1	Open NEW PowerShell	Do NOT close the backend terminal! Open a second window.
2	Navigate to frontend	<code>cd C:\Users\VICTUS\Desktop\BizPredictAI\frontend\venturevista-ai</code>
3	Install npm packages	<code>npm install</code> (wait 3-5 minutes for all dependencies)
4	Run development server	<code>npm run dev</code>
✓	Success indicator	See: ▲ Next.js - Local: http://localhost:3000

STEP 3: TEST THE APPLICATION

3.1 Open browser: `http://localhost:3000`

3.2 Login page: Enter any email (e.g., `test@example.com`) and password → Click **Sign Up**

3.3 Dashboard: You should see colorful feature cards

3.4 Test Evaluate: Click **Evaluate** → Fill: City=Pune, Industry=Technology, Investment=500000, Experience=3 → Click **Run AI Prediction**

3.5 Explore: Try Suggest, SWOT, Pitch Generator, Legal Checklist from sidebar

STEP 4: PUSH TO GITHUB

#	Action	Command/Instructions
1	Create GitHub repo	Visit https://github.com/new → Name: BizPredictAI → Public → Create
2	Initialize git	<code>cd C:\Users\VICTUS\Desktop\BizPredictAI</code> <code>git init</code>
3	Stage all files	<code>git add .</code>
4	First commit	<code>git commit -m "Initial commit: BizPredictAI v1.0"</code>
5	Connect to GitHub	<code>git remote add origin https://github.com/YOUR_USERNAME/BizPredictAI.git</code> <code>git branch -M main</code>
6	Push to GitHub	<code>git push -u origin main</code>
✓	Verify	Refresh GitHub page - you'll see all files uploaded!

Replace **YOUR_USERNAME** with your actual GitHub username in step 5.

■ COMMON ISSUES & FIXES

Issue	Fix
"Could not connect to backend"	Restart backend: python -m uvicorn main:app --reload
"Module not found" error	Install dependencies: pip install fastapi uvicorn pydantic sqlalchemy
Port 3000 already in use	Use different port: npm run dev -- -p 3001 → Visit http://localhost:3001
Pages not loading (404)	Make sure pitch/page.tsx exists (NOT in api/pitch folder!)
Dark mode broken	Hard refresh browser: Ctrl + Shift + R

■ 13 FEATURES READY TO USE

■ Evaluate | ■ Suggest | ■■ Compare | ■ Market Intel | ■ Action Plan | ■■ Heatmap | ■ SWOT | ■ Name Gen | ■ Pitch Deck | ■ Legal Checklist | ■ Quiz | ■ Trends | ■ Funding Calc

Tech Stack: Next.js 14 + FastAPI + Python + SQLite | Time to Setup: ~30 minutes | Status: Production Ready ✓
